Reasons for Allowance

1. This is in response to the claims filed on 11/09/2007.
2. Claims 1-25 are allowed.

The cited prior arts taken alone or in combination fail to teach a method for tracing an instrumented program during booting, as recited in the manner in the independent Claims 1, 11, 20, 23.

Examiner has relied on the references of record:

Prior art of record, Tamches, "Fine-Grained Dynamic Instrumentation of Commodity Operating System Kernels", where Tamches discloses tracing instrumented programs and loading code patch into a kernel in the manner in the specification.

However, Applicants have traversed the reference of record. See all the Applicant's remarks (filed on 11/09/07). Particularly, Applicants explained that the specification describes anonymous consumer state as "the state of the tracing framework after a property file is processed". Accordingly, Applicants pointed out that Tamches' instrumentation is performed by *user-level* programs where the KernInst system of Tamches allows applications to instrument the kernel using a *user-level* daemon; thus, the instrumented programs are traced while user-level programs are *unable to execute*. Applicants concluded the instrumentation by *user-level* programs as recited in Tamches is not equivalent to tracing while user-level programs are *unable to execute* as explicitly recited in amended independent claims 1, 11, 20, 23.
